# **Test Report**

# Personal Fall Arrest Equipment ANSI Z359.13-2013 Energy Absorbing Lanyard

Report no: 2.15.09.13

Client: Jinhua Jech Tools Co.,Ltd

No.10 Jinlong Road, Bailongqiao Town, Jinhua City, Zhejiang,

China

Manufacturer: Jinhua Jech Tools Co., Ltd

Client order: Email confirmation

Order received: 17 September 2015

Model: JE322204C

Dates of tests: 18 September 2015 to 22 September 2015

Signed: Issued: 24 September 2015

#### Conditions

This report may be reproduced and distributed to your clients, provided that it is reproduced and distributed in full.

Specimens will be disposed of four weeks from the date of this report, unless otherwise instructed,

Opinions, comments and interpretations expressed in this report are shown in italics.

Copies of INSPEC interpretations referenced in this report are available upon request.

Tests marked 

are not included in our ACLASS Scope of Accreditation.

ECH

This report has been provided in accordance with our standard Terms of Business, which can be viewed at, and printed from:

### Summary of assessment\* - Energy Absorbing Lanyard

Clause	Requirement	Assessment (See Key)
3.2	Energy absorber	Ltd
3.2.1	Material	NAs
3.2.2	Terminations	Ltd
3.2.3	Connectors	
3.2.4	Dynamic performance – ambient dry	Pass
	Dynamic performance – ambient wet	Pass
3.2.5	Dynamic performance – cold dry	Pass
	Dynamic performance – hot dry	Pass
3.2.6	Static strength	
3.2.7	Static test for wrap-around lanyards (3600 lbf – abraded)	The state of the s
3.2.8	Static test for wrap-around lanyards (5000 lbf – unabraded)	
3.2.9	Static test for Y-lanyards	Pass
3.2.10.1	Dynamic test for Y-lanyards (Single connection)	Pass
3.2.10.2	Dynamic test for Y-lanyards (Dual connection)	Pass
3.2.10.3	Dynamic test for Y-lanyards (Hip connection)	Pass
5.1 / 5.2	Marking	Ltd
5.3	Instructions	Pass

#### Key

	Shading shows the clauses requested. Any other clauses were not requested.	
Pass	Requirement satisfied.	
Ltd	Testing requested was insufficient completely to verify compliance with the clause. Refer to the "Result details" section for more information.	
Fail	Requirement not satisfied. Refer to the "Result details" section for more information.	
NAs	Assessment not carried out.	
NAp Requirement not applicable.		
NT	Requested but not tested due to early termination following failure.	

Assessment relates only to those specimens which were tested and are the subject of this report.

#### Submission details

Product	Quantity	Date received	INSPEC specimen no. (job 2C151+)
Twin Legged Energy Absorber Lanyard, model JE322204C	10	26 August 2015	01 to 10

#### **Procedures**

BECH

The specimens detailed within the submissions above were used for the tests covered by this report.

Testing was performed in accordance with ANSI Z359.13-2013 unless otherwise specified below. Reference should be made to the standard when reading this report.

Unless stated otherwise, specimens were tested in the condition as received by INSPEC.

Testing was performed at INSPEC's laboratory in Kunshan, China.

- 5.1 / 5.2 Marking labels were supplied electronically and used for assessment.
- 5.3 / 5.4 Instruction requirements were supplied electronically and used for assessment.

MECH

#### Result details - Energy absorber

#### 3.1 Personal Energy Absorber Component

Specimens 2C15101 to 2C15103 were assessed and satisfied the design and testing requirements of this standard.

Ltd

#### 3.1.1 Classifications

The specimens assessed were classified by the manufacturer as "6 ft FF".

Pass

#### 3.1.2 Materials

The personal energy absorber was constructed of webbing. The characteristics of the material used were not assessed. Manufacturer to certify.

NAS

#### 3.1.3 Terminations

Specimen 2C15101 was assessed.

The end terminations satisfied 3.1.3.2, as appropriate (see below).

### 3.1.3.2 Webbing terminations

Specimen 2C15101 was assessed.

Lock stitches sewn on all stitched eye termination straps were not assessed. a) NAs Manufacturer to certify.

The material and characteristics of thread used was not assessed. Manufacturer to b) certify.

NAs

Threads used for sewing the harness were white colour. This contrasted with the red colour of the webbing.

Pass

The webbing was protected at load-bearing connector elements. C)

Pass

e) The ends of the webbing were seared and fused so as to prevent unravelling.

Pass

Pass

#### 3.1.5 Deployment indicator

Subsequent to the testing of specimen 2C15103 against clause 3.2.4, it became Pass obvious that the energy absorber component had been activated.

3.1.6 Activation force

Specimen 2C15102 was assessed.

The specimens showed no sign of activation when subjected to the 450 pounds static force.

Pass

The permanent elongation following the test was 0.55 inches. This is less than the maximum 2 inches permitted.

#### Result details - Energy absorbing lanyard

### 3.2 Energy Absorbing Lanyard Component

Specimens 2C15101 to 2C15108 were assessed.

The specimens each incorporated a Personal Energy Absorber Component which satisfied this standard.

Ltd

#### 3.2.1 Material

Specimen 2C15101 was assessed.

Rope was used on the construction of the energy absorbing lanyard.

The materials used in the construction of this energy absorbing lanyard, and their characteristics, were not assessed. Manufacturer to certify.

NAS

#### 3.2.2 Terminations

BECK

Specimen 2C15101 was assessed.

The energy absorbing lanyard was constructed of fibre rope.

The end terminations satisfied 3.2.2.2, as appropriate (see below).

Ltd

### 3.2.2.2 Webbing terminations

Specimen 2C15101 was assessed.

 Lock stitches sewn on all stitched eye termination straps were not assessed. NAs Manufacturer to certify.

NAs

 The material and characteristics of thread used was not assessed. Manufacturer to certify.

Threads used for sewing the fibre rope were white colour. This contrasted with the black dotted colour of the fibre rope.

Pass

The webbing was protected at load-bearing connector elements.

Pass

The ends of the lanyard were seared and fused so as to prevent unravelling.

Pass

Pass

Pass

#### 3.2.4 Dynamic performance test - Ambient dry condition

Specimen 2C15103 was assessed.

During the dynamic performance test, the average arrest force was 783 pounds. This value is less than the maximum 900 pounds permitted. See Annex 1 for the plot of force versus time.

During the dynamic performance test, the maximum arrest force was 1015 pounds.

This value is less than the maximum 1,800 pounds permitted.

See Annex 1 for the plot of force versus time.

During the dynamic performance test, the deployment distance was 40.9 inches. Pass This value is less than the maximum 48 inches permitted.

#### 3.2.5 Dynamic performance test - Ambient wet condition

Specimen 2C15104 was assessed.

During the dynamic performance test, the average arrest force was 882 pounds. Pass This value is less than the maximum 1,125 pounds permitted. See Annex 1 for the plot of force versus time.

During the dynamic performance test, the maximum arrest force was 1217 pounds. Pass This value is less than the maximum 1,800 pounds permitted. See Annex 1 for the plot of force versus time.

During the dynamic performance test, the deployment distance was 33.1 inches. Pass This value is less than the maximum 48 inches permitted.

### 3.2.5 Dynamic performance test - Cold dry condition

Specimen 2C15105 was assessed.

ECH

During the dynamic performance test, the average arrest force was 790 pounds. Pass This value is less than the maximum 1,125 pounds permitted. See Annex 1 for the plot of force versus time.

During the dynamic performance test, the maximum arrest force was 1039 pounds. Pass This value is less than the maximum 1,800 pounds permitted. See Annex 1 for the plot of force versus time.

During the dynamic performance test, the deployment distance was 39.8 inches. Pass This value is less than the maximum 48 inches permitted.

Pass

Pass

#### 3.2.5 Dynamic performance test - Hot dry condition

Specimen 2C15106 was assessed.

During the dynamic performance test, the average arrest force was 791 pounds. This value is less than the maximum 1,125 pounds permitted.

See Annex 1 for the plot of force versus time.

During the dynamic performance test, the maximum arrest force was 1052 pounds. This value is less than the maximum 1,800 pounds permitted. See Annex 1 for the plot of force versus time.

During the dynamic performance test, the deployment distance was 40.9 inches. Pass This value is less than the maximum 48 inches permitted.

#### 3.2.9 Static strength - Y-lanyards only

Specimens 2C15103 and 2C15107 were assessed.

Leg A of specimen 2C15103 withstood the tensile test of 5,000 pounds applied for 1 minute without breaking.

Legs A and B of specimen 2C15107 withstood the tensile test of 5,000 pounds Pass applied for 1 minute without breaking.

#### 3.2.10.1 Dynamic test, Y-lanyards only - Single connection

See results of clause 3.2.4 of this report.

Pass

Pass.

#### 3.2.10.2 Dynamic test, Y-lanyards only - Dual connection

Specimen 2C15107 was assessed.

During the dynamic test, the maximum arrest force was 964 pounds. This value is Pass less than the maximum 1,800 pounds permitted. See Annex 1 for the plot of force versus time.

#### 3.2.10.3 Dynamic test, Y-lanyards only - Hip connection

Specimen 2C15108 was assessed.

During the dynamic test, the nylon keeper was broken.

The energy absorbing lanyard did include a warning label on each leg according to Pass clause 5.2.2.

### 5.1 / 5.2 Marking

The detailed results of the assessments are on page 10 of this report.

Pass

#### 5.3 Instructions

The detailed results of the assessments are given on page 11 of this report.

Pass

#### 5.1 General Marking Requirements

5.1.1	Markings shall be in English.	Pass
5.1.2	The legibility and attachment of required markings shall endure for the life of the	NAs

Marking labels were supplied electronically and used for assessment.

When pressure sensitive labels are used, they shall comply with the applicable provision of reference 8.5.1. No pressure sensitive labels were used.

NAp

NAp

5.1.3 Except for connectors, as set forth in Section 5.2.1, equipment shall be marked with

the following:	
- part number and model designation;	Pass
year of manufacture;	Pass
· manufacturer's name or logo;	Pass
- capacity rating:	Pass
· serial number;	Pass
- standard number;	Pass
warning to follow the manufacturer's instructions included with the equipment at time of shipment from the manufacturer.	Pass

time of shipment from the manufacturer.	
Specific Marking Requirements	
Energy absorbing lanyards shall be marked to identify:	
· the fiber used in the material of construction;	Pass
- the length;	Pass
<ul> <li>the need to avoid contact with sharp edges and abrasive surfaces;</li> </ul>	Pass
· the need to make only compatible connections;	Pass
the maximum elongation;	Pass
<ul> <li>restriction, if any, on the types of components, subsystems or systems with which the personal energy absorber is designed to be used;</li> </ul>	NAp
<ul> <li>the average arrest force, maximum free fall distance and capacity of the personal energy absorber on a separate label identical in size, color and content as figure 16a and 16b;</li> </ul>	Pass
<ul> <li>6 ft FF personal energy absorbers shall be in black print on a contrasting white background. See figure 16a;</li> </ul>	Pass

· 12 ft FF personal energy absorbers shall be in white print on a contrasting black

BECH

### 5.3 General Instruction Requirements

5.3.1	Instructions shall be provided to the user, printed in English.	Pass	
	User instructions in English were supplied electronically and used for assessment.		
5.3.2	Instructions shall contain the following information:	3/11=	
	· a statement that the manufacturer's instructions shall be provided to users;	Pass	
	- manufacturer's name, address, and telephone number;	Pass	
	<ul> <li>manufacturer's part number and model designation for the equipment;</li> </ul>	Pass	
	· intended use and purpose of the equipment;	Pass	
	<ul> <li>proper method of use and limitation on use of the equipment;</li> </ul>	Pass	
	<ul> <li>illustrations showing locations of markings on the equipment;</li> </ul>	Pass	
	<ul> <li>reproduction of printed information on all markings;</li> </ul>	Pass	
	<ul> <li>inspection procedures required to assure the equipment is in serviceable condition and operating correctly;</li> </ul>	Pass	
	· anchorage requirements;	Pass	
110	· an illustration of how to calculate free fall distances;	Pass	
7	<ul> <li>criteria for discarding equipment which falls inspection;</li> </ul>	Pass	
4	<ul> <li>procedures for cleaning, maintenance, and storage;</li> </ul>	Pass	1
	<ul> <li>reference to the ANSI/ASSE Z359.13, Personal Energy Absorbers and Energy Absorbing Lanyards, standard and applicable regulations governing occupational safety.</li> </ul>	Pass	
5.3.2	Instructions shall require that only the equipment manufacturer, or persons or entities authorized in writing by the manufacturer, shall make repairs to equipment.		
	Repair was not permitted	NAp	
5.3.4	Instructions shall require the user to remove equipment from field service if it has been subjected to the forces of arresting a fall.	Pass

<sup>\*</sup> The acceptance criterion for this test is a straightforward "Pass/Fail", rather than a numerical value. Consequently, as there is no value to be reported, uncertainty has not been reported either.

Values expressed as a percentage (%) are relative.

ECH

It should be noted that the above values have not been taken into account when making assessment to the pass/fail criteria.

ECH.
