Test Report

Personal Fall Arrest Equipment ANSI/ASSE Z359.11-2014 Full Body Harness

Report no: 2.20.10.07

Client: Jinhua Jech Tools Co., Ltd.

No.1448 Tongxi Road, Linjiang Industrial Park

Wucheng District Jinhua City Zhejiang 321025

China

Manufacturer: Jinhua Jech Tools Co., Ltd.

Client order: T/0756

Order received: 18 June 2020

Model: JE135005P (GREEN)

Dates of tests: 16 September 2020 to 20 October 2020

Signed:

Steven Sum, Laboratory Manager

Issued: 22 October 2020

Full body harness, model JE135005P (GREEN)	01	26 August 2020	2H13601

Procedures

ECH

The specimens detailed within the submissions above were used for the tests covered by this report.

Testing was performed in accordance with ANSI Z359.11-2014 unless otherwise specified below. Reference should be made to the standard when reading this report.

Unless stated otherwise, specimens were tested in the condition as received by INSPEC.

Testing was performed at INSPEC's laboratory in Kunshan, China.

The client made the following declarations:

CL

Full body harness JE135005P(GREEN) is a colour variant of model JE135005P (BLUE).

Both harnesses are made of the same materials (tape, threads and hardware), same sewing and same dimensions.

Model JE135005P (BLUE) was tested and reported in Inspec Test Report 2.20.10.04

To avoid duplicate testing, performance testing results of JE135005P (BLUE) are shared across to model JE135005P (GREEN) and used in this report.

Result details

3 Require	ements
-----------	--------

Design Requirements 3.1

3.1	Design Requirements	
3	Specimen 2H13601 was assessed.	
3.1.1	The specimen permanently incorporated a dorsal attachment element.	Pass

The specimen did incorporate another attachment element. The other attachment element was located at the Hip.

3.1.2	The specimen did incorporate a load bearing sub-pelvic strap.	Pass
-------	---	------

3.1.3 All shoulder straps on the specimen came together at the dorsal location and were Pass crossed and attached with a connector (a D-ring).

> Testing of the D-ring was not requested. NAS

The specimen permanently incorporated a back strap as a means to control the Pass separation of the shoulder straps at the back of the full body harness.

> When the specimen was mounted on to the torso as per manufacturer's instructions, some portion of the back strap was located between datum levels G and K.

3.1.5 The specimen was not equipped with modular components or assemblies. NAp

3.1.5.1 Not applicable.

3.1.5.2 The specimen was not equipped with an attachment element extender; therefore NAp

this clause is not applicable.

3.1.6 The specimen was not integrated into a vest or garment. NAp

3.1.7 The specimen was equipped with two fall arrest indicators. Pass

> Both fall arrest indicators deployed during dynamic testing defined in section 3.2 Pass when attached to the dorsal attachment element.

It was visually possible to inspect the fall arrest indicators.

3.1.7.1 The specimen was not equipped with fall arrest indicators on the other attachment NAp element.

3.1.8 The specimen was not equipped with connecting subsystem combinations. NAp

3.1.9 The specimen did include strap retainers (keepers) which served to control the Pass

loose ends of straps.

3.1.10 Static Feet First Test - Lanyard Parking Attachment Element

Specimens 2H18301, 2H18302 and 2H18303 were assessed.

Each specimen was equipped with two lanyard parking attachment elements.

The two lanyard parking attachment elements did not differ in design.

During the static feet first tests, the lanyard parking attachment element disengagement loads were 67.4, 71.9 and 69.7 pounds respectively.

The above values were less than the maximum 120 pounds permitted.

Pass

Specimen 2H13601 was assessed.

3.1.11 It was not possible to remove elements of the full body harness that support the shoulders / upper torso from those that support the legs / lower torso. Pass

3.1.12 The dorsal attachment element was located along the vertical centreline of the full body harness.

Pass

3.1.13 The specimen did not incorporate a sternal attachment element.

NAp

3.1.14 The specimen did include a sub-pelvic strap therefore this clause is not applicable.

NAp

3.2 Attachment Element Requirements

3.2.1 Dorsal

ECH

Specimen 2H13601 was assessed.

The dorsal attachment element was located in the dorsal area shown in figure 4 of the standard.

Pass

The dorsal attachment element was specified in the User Instructions to be used for fall arrest.

Pass

3.2.1.1 The dorsal attachment was specified in the User Instructions to be used in travel restraint.

3.2.1.2 During the dynamic performance test in 3.2.1.3, it was confirmed that the design of the full body harness directed the load through the shoulder straps supporting the user and around the thighs. Pass

3.2.1.3 Dorsal Attachment Element Requirements

3.2.1.3.1 Dynamic Feet First Test

Specimen 2H18304 was assessed.

During the dynamic feet-first test, the test torso was not released.

Pass

The harness did support the test torso for a period of five minutes post fall.

Pass

During this period, the angle of the test torso to vertical was 9 degrees. This value is less than the maximum 30 degrees permitted.

Pass

Both fall arrest indicators deployed visibly and permanently on each specimen.

Pass

Full body harness stretch was 11.4 inches. Full body harness stretch stated in the manufacturer's instructions was 18 inches.

he P

Full body harness stretch shall not exceed 18 inches, or that which is stated in the manufacturer's instructions, whichever is less, was satisfied Pass

Specimen 2H18305 was assessed.

During the dynamic feet-first test, the test torso was not released.

Pass

The harness did support the test torso for a period of five minutes post fall.

Pass

During this period, the angle of the test torso to vertical was 8 degrees. This value is less than the maximum 30 degrees permitted.

Pass

Both fall arrest indicators deployed visibly and permanently on each specimen.

Pass

Full body harness stretch was 10.6 inches. Full body harness stretch stated in the manufacturer's instructions was 18 inches.

Full body harness stretch shall not exceed 18 inches, or that which is stated in the

Pass

Specimen 2H18306 was assessed.

During the dynamic feet-first test, the test torso was not released.

manufacturer's instructions, whichever is less, was satisfied

Pass

The harness did support the test torso for a period of five minutes post fall.

Pass

During this period, the angle of the test torso to vertical was 7 degrees. This value is less than the maximum 30 degrees permitted.

Pass

Both fall arrest indicators deployed visibly and permanently on each specimen.

Pass

Full body harness stretch was 9.9 inches. Full body harness stretch stated in the manufacturer's instructions was 18 inches.

Full body harness stretch shall not exceed 18 inches, or that which is stated in the manufacturer's instructions, whichever is less, was satisfied

Pass

3.2.1.3.2 Dynamic Head First Test

Specimen 2H18307 was assessed.

During the dynamic head-first test, the test torso was not released.

Pass

The harness did support the test torso for a period of five minutes post fall.

Pass

During this period, the angle of the test torso to vertical was 12 degrees. These values were less than the maximum 30 degrees permitted.

Pass

Both fall arrest indicators deployed visibly and permanently on each specimen.

Pass

Specimen 2H18308 was assessed.

During the dynamic head-first test, the test torso was not released.

Pass

The harness did support the test torso for a period of five minutes post fall.

Pass

During this period, the angle of the test torso to vertical was 11 degrees. These values were less than the maximum 30 degrees permitted.

Pass

Pass

Both fall arrest indicators deployed visibly and permanently on each specimen.

Specimen 2H18309 was assessed.

During the dynamic head-first test, the test torso was not released.

Pass

The harness did support the test torso for a period of five minutes post fall.

Pass

During this period, the angle of the test torso to vertical was 13 degrees. These values were less than the maximum 30 degrees permitted.

Pass

Both fall arrest indicators deployed visibly and permanently on each specimen.

Pass

3.2.1.3.3 Static Feet First Test

Specimen 2H18310, 2H18311 and 2H18312 were assessed.

During the static feet-first tests, the test torso was not released from the harness.

Pass

During the static feet-first tests, all adjusters did not slip.

Pass

The straps to which buckle and eyelet adjusters were fitted did not tear.

Pass

All other straps did not show signs of tearing.

Pass

3.2.1.3.4 Fall Arrest Indicator Test

Specimens 2H18313, 2H18314 and 2H18315 were assessed.

When tested using the dorsal attachment element, both fall arrest indicators deployed visibly and permanently.

Pass

3.2.6 Hip

MECH

Specimen 2H13601 was assessed.

The hip attachment elements were specified in the User Instructions to be used as a pair.

Pass

The hip attachment elements were specified in the User Instructions to be used solely for work positioning or travel restraint.

Pass

The hip attachment elements were specified in the User Instructions not to be used for fall arrest.

Pass

3.2.6.1 Hip Attachment Element Requirements

3.2.6.1.1 Static Feet First Test

Specimens 2H18316, 2H18317 and 2H18318 were assessed.

During the static feet-first tests, the test torso was not released from the harness.

Pass

During the static feet-first tests, all adjusters did not slip.

Pass

The straps to which buckle and eyelet adjusters were fitted did not tear.

Pass

All other straps did not show signs of tearing.

3.3 Components Requirements

3.3.1 Load Bearing Straps

Specimen 2H13601 was assessed.

- 3.3.1.1 The minimum width of the load bearing straps was 44 mm. This is more than the minimum 41 mm specified.
- 3.3.1.2 Strap specimens 2H18322A to 22E and 2H18323A to 23E withstood the tensile Pass tests of 5,000 pounds applied for 1 minute without breaking.
- 3.3.1.3 The material and characteristics of load-bearing straps were not assessed. NAs Manufacturer to certify.
- 3.3.1.4 The ends of load bearing straps were hot-cut so as to prevent fraying. Pass
- 3.3.1.5 Following abrasion conditioning, strap specimens 2H18322F to 22J and Pass 2H18323F to 23J withstood the tensile tests of 3,600 pounds applied for 1 minute without breaking.
- 3.3.1.6 Straps in contact with the metal connector at the dorsal attachment element were protected from wear. A black plastic sleeve was used.
 - Straps in contact with the tongue buckles were protected from wear. Grommets Pass were used.
- 3.3.1.7 The spacing between holes centres of adjacent eyelets for buckle and eyelet type adjusters used in the specimen was 48 mm. This is more than the minimum 29 mm and less the maximum 50 mm specified.

3.3.2 Thread and Stitching

Specimen 2H13601 was assessed.

- 3.3.2.1 The material and characteristics of thread used was not assessed. Manufacturer to certify.
- 3.3.2.2 All types of stitching were not assessed. Manufacturer to certify. NAs
- 3.3.2.3 Threads used for sewing the harness were white colour. This contrasted with the black and green colours of the load bearing straps.

3.3.3 Connecting Components

Specimen 2H13601 was assessed.

- 3.3.3.1 Testing of connecting components was not requested. NAs
- 3.3.3.2 Soft loop attachments were not used. NAp
- 3.3.3.3 Soft loop attachments were not used. NAp
- 3.3.3.4 Soft loop attachments were not used. NAp

- Note 1 The acceptance criterion for this test is a straightforward "Pass/Fail", rather than a numerical value. Consequently, as there is no value to be reported, uncertainty has not been reported either.
- Note 2 The uncertainty value is based on a standard uncertainty multiplied by a coverage factor k = 2, which provides for a confidence level of approximately 95%. Values expressed as a percentage (%) are relative.
- Note 3 It should be noted that the above values have not been taken into account when making assessment to the pass/fail criteria.
